Short Term Courses 2021-22

Short Term Course in,  
Photojournalism [level-1]

### SYLLABUS

#### Course Description :

This is an introductory course in photojournalism presented in a multimedia context. Students will use the journalism College's Canon DSLR (those who have equivalent cameras of their own are encouraged to use them). The course will be taught as a hands-on workshop. Instruction will progress from basic camera operation and the news "one shot" to more comprehensive visual storytelling that may incorporate audio, video or other multimedia components.

Despite technologies that in recent years have transformed how news photography is produced and distributed, the strength of the still image remains undiminished. In fact, the market for stories communicated visually has never been stronger. Photographs, presented alone or as an essay in a multimedia context, continue to provide the photojournalists who make them a uniquely powerful window onto the world in which we live.

This course will help the students become well rounded in the fundamentals of digital Photojournalism. Four areas of instruction will be emphasized: How cameras work in field of Journalism, how composition works, how lighting works, how to use photo editing software. Students will, generally, receive basic instruction, demonstration, and see samples of the desired outcomes, at the beginning of each period. They will be allowed to go outside and shoot assignments, based on what they are learning. Perhaps the most useful part of classroom instruction will be daily reviews of photos students have shot the previous day(s). They will see what makes a successful photo and what does not.

**Introduction**

As the world entered the era of python, the need for its storage also grew. It was the main challenge and concern for the enterprise industries until 2010. The main challenge and concern for the enterprise industries until 2010. The main focus was on building framework and solutions to store data. Now when Hadoop and other frameworks have successfully solved the problem of storage, the focus and other frameworks have successfully solved the problem of storage, the focus has shifted to the processing of this data. Data Science is the secret source here. All the ideas which you see in Hollywood sci-fi movies can actually turn into reality by Data Science. Data Science is the future of Artificial Intelligence. Therefore, it is very important to understand what is Data Science and how can it add value to your business.

Data science is all about finding and exploring data in the real world and using that knowledge to solve business problems. Some examples of data science are:

**Customer Prediction** – System can be trained based on customer behaviour pattern stop predict the likelihood of a customer buying a product.

**Service Planning** – Restaurants can predict how many customers will visit on the weekend and plan their food inventory to handle the demand.
